PROFILE

Software engineer and sole technical co-founder of Jurisphere, building production AI agents, document-processing pipelines, and retrieval systems for 500+ paying B2B customers and approximately 2,100 monthly active users. Built solo through the first year, then led six engineers while remaining hands-on in AI and backend architecture.

EXPERIENCE

Jurisphere.ai - Co-Founder and CTO November 2023-Present

AI platform for law firms, chambers, and in-house legal teams; reached $1M ARR while bootstrapped and subsequently raised $2.2M.

- Built the product alone through its first year and initial monetization; subsequently led six engineers across day-to-day delivery, major engineering initiatives, and technical strategy.
- Developed document ingestion across conversion, OCR, chunking, embedding, and indexing for a platform handling approximately 90K file uploads and 7.2M uploaded document pages per month; evolved hybrid BM25/vector retrieval and legal-data indexing.
- Migrated shared LLM infrastructure from LangChain to PydanticAI across assistant and document-analysis workflows; extracted research, memory, mail, and attached-file functionality into composable agent capabilities.
- Implemented conversation compaction with separate full-transcript and model-facing histories, combining tool-result clearing and summarization while preserving user-visible conversations and recovery state.
- Introduced shared production/evaluation agent construction and a pydantic-evals runner; instrumented model usage and agent execution with Logfire and OpenTelemetry.
- Migrated document ingestion and assistant execution into Temporal workflows; redesigned Redis/SSE streaming with reconnect snapshots and contributed the AG-UI migration across web and mobile.
- Developed a Word-integrated assistant with document-aware edit suggestions, multi-turn history, and persisted edit application state across the Office.js client and backend workflows.

Magnify Labs - Software Engineer March 2023-October 2023

- Developed Ethereum smart contracts, Graph Protocol subgraphs, TypeScript SDKs, and React interfaces for interacting with the contracts.

Solvent Protocol - Software Engineer March 2022-February 2023

- Developed Solana smart-contract features and TypeScript SDKs; built a PostgreSQL-backed cache of on-chain transactions and state to support frontend queries and historical statistics.

Harmonic - Software Engineer April 2021-February 2022

- Built FastAPI endpoints for internal and external consumers and refactored Python microservices supporting a data pipeline.
- Added unit tests and handled production debugging in a backend stack using PostgreSQL, Redis, Docker, and GCP.

Independent Consultant - Software Engineer January 2016-February 2021

- Delivered software for individual founders and businesses using Python web frameworks, browser automation, scraping tools, databases, and cloud services.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL

AI Systems: PydanticAI, pydantic-evals, agent capabilities, context compaction, hybrid retrieval, Turbopuffer

Backend: FastAPI, PostgreSQL, Redis, Temporal, document ingestion/OCR, SSE, AG-UI

Delivery: Docker, Kubernetes, GCP, Azure, Logfire, OpenTelemetry; React, Next.js, Office.js

EDUCATION

Indian Institute of Technology Delhi

Integrated BTech and MTech, Computer Science · 2016-2021
