PROFILE

Hands-on engineer and sole technical co-founder of Jurisphere, a production B2B SaaS platform serving 500+ paying customer organizations. Built the product solo through its first year and monetization, then led six engineers. Experience spans React/Next.js and TypeScript interfaces, Python/FastAPI services, PostgreSQL-backed workflows, large-file uploads, and production infrastructure.

EXPERIENCE

Jurisphere.ai - Co-Founder and CTO
November 2023-Present

AI platform for law firms, chambers, and in-house legal teams; reached $1M ARR while bootstrapped and subsequently raised $2.2M.

- Built the initial product alone and owned architecture, implementation, and deployment; subsequently led six engineers while remaining hands-on across frontend, backend, and infrastructure.
- Developed React/Next.js interfaces and Python/FastAPI backend workflows for document analysis, legal research, and citation-aware drafting, connecting customer-facing features across the stack.
- Built organization provisioning, subscription-driven access, seat-scaled allowances, and self-serve trial flows; integrated CRM and billing webhooks with application state.
- Implemented multipart uploads for large ZIP archives with Uppy, presigned part URLs, adaptive chunk sizing, and completion/abort endpoints, alongside upload-byte accounting.
- Developed document-library ingestion across uploads, conversion, OCR, indexing, and asynchronous processing for a platform handling approximately 90K files and 7.2M uploaded pages in a month.
- Migrated ingestion and assistant execution into Temporal workflows; built Redis/SSE streaming with reconnect snapshots and fixed a subscription race that could leave completed responses open.
- Built PostgreSQL-backed usage-credit systems with feature wallets, monthly pools, and auditable ledgers; added distributed tracing and Grafana dashboards for production troubleshooting.
- Built client-specific deployments and branded webapps on separate subdomains and custom domains, with organization-to-host routing and reusable Terraform/Terragrunt, Kubernetes, Helm, and ArgoCD configuration.

Magnify Labs - Software Engineer (Part-time)
March 2023-October 2023

- Developed Ethereum smart contracts, Graph Protocol subgraphs, TypeScript SDKs, and React interfaces for interacting with the contracts.

Solvent Protocol - Software Engineer
March 2022-February 2023

- Developed Solana smart-contract features and TypeScript SDKs; built a PostgreSQL-backed cache of on-chain transactions and state for frontend queries and historical statistics.

Harmonic - Software Engineer
April 2021-February 2022

- Built FastAPI endpoints and refactored Python microservices supporting a data pipeline; added unit tests and handled production debugging using PostgreSQL, Redis, Docker, and GCP.

Independent Consultant - Software Engineer
January 2016-February 2021

- Delivered software for founders and businesses using Python web frameworks, browser automation, scraping tools, databases, and cloud services.

TECHNICAL SKILLS

Languages & Web: TypeScript, Python, SQL, React, Next.js, FastAPI
Data & Systems: PostgreSQL, Redis, Temporal, SSE, object storage, multipart uploads
Delivery: GitHub Actions, Docker, Kubernetes, Terraform/Terragrunt, Helm, ArgoCD, GCP, Azure

EDUCATION

Indian Institute of Technology Delhi
Integrated BTech and MTech, Computer Science · 2016-2021
