PROFILE

Backend and platform engineer and sole technical co-founder of Jurisphere, serving 500+ paying B2B customers and approximately 2,100 monthly active users. Built the product solo through its first year, then led six engineers across backend architecture, asynchronous processing, deployment infrastructure, and operations while remaining hands-on.

EXPERIENCE

Jurisphere.ai - Co-Founder and CTO November 2023-Present

AI platform for law firms, chambers, and in-house legal teams; reached $1M ARR while bootstrapped and subsequently raised $2.2M.

- Built the product alone through its first year and initial monetization; subsequently led six engineers, owning day-to-day execution, major engineering initiatives, and technical strategy.
- Migrated document ingestion and assistant execution into Temporal workflows with modular activities; added retry policies, worker graceful shutdown, and queue separation for interactive and background work.
- Redesigned Redis/SSE streaming around Pub/Sub and expiring snapshots for reconnect recovery; contributed an AG-UI protocol migration spanning backend processing and web/mobile clients.
- Built reusable Terraform/Terragrunt infrastructure and Kubernetes/Helm deployments across GCP, Azure, and k3s, with ArgoCD GitOps, deployment-specific configuration, and automated preview environments.
- Developed document-ingestion and hybrid-search infrastructure for a platform handling approximately 90K file uploads and 7.2M uploaded pages per month, including OCR/indexing workflows, legal-data backfills, and search-index state tracking.
- Added OpenTelemetry tracing, trace/log correlation, and Grafana dashboards; implemented cross-organization search-index backups with completion markers and isolated restore tooling.
- Built HubSpot/Chargebee provisioning and subscription-access integration, plus usage wallets and monthly pools with grant/consumption ledgers and LLM-cost-aware settlement.

Magnify Labs - Software Engineer (Part-time) March 2023-October 2023

- Developed Ethereum smart contracts, Graph Protocol subgraphs, TypeScript SDKs, and React interfaces for interacting with the contracts.

Solvent Protocol - Software Engineer March 2022-February 2023

- Developed Solana smart-contract features and TypeScript SDKs; built a PostgreSQL-backed cache of on-chain transactions and state to support frontend queries and historical statistics.

Harmonic - Software Engineer April 2021-February 2022

- Built FastAPI endpoints for internal and external consumers and refactored Python microservices supporting a data pipeline.
- Added unit tests and handled production debugging in a backend stack using PostgreSQL, Redis, Docker, and GCP.

Independent Consultant - Software Engineer January 2016-February 2021

- Delivered software for individual founders and businesses using Python web frameworks, browser automation, scraping tools, databases, and cloud services.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL

Backend: FastAPI, PostgreSQL, Redis, Temporal, SSE, hybrid keyword/vector search

Infrastructure: GCP, Azure, Docker, Kubernetes, Terraform/Terragrunt, Helm, ArgoCD, GitHub Actions

Operations: OpenTelemetry, Grafana, Logfire, Sentry, backup/recovery tooling; React, Next.js

EDUCATION

Indian Institute of Technology Delhi

Integrated BTech and MTech, Computer Science · 2016-2021
